SUMMARY

Full-stack developer with 8+ years of experience across telecom, industrial IoT, fintech, gaming and SaaS. I work mainly in React, Vue, TypeScript and Node, with Java and Python on the backend, and I am comfortable handling my own deployments on AWS and Azure. Right now I am building an internal CRM at Qopla where I am both the product owner and the developer, so I decide what gets built and then build it. I have also led teams: lead developer and Scrum Master in a 22 person group at Telia, and before that I ran my own game project where I hired and managed the people working on it.

KEY SKILLS

TypeScript | React | Vue.js | Node.js and NestJS | Java and Spring Boot | Python | GraphQL and REST | AWS and Azure | Scrum

EXPERIENCE

Full-Stack Developer and Scrum Master | Qopla AB Oct 2025 - Present

Stockholm. Restaurant POS and SaaS.

- Building Qopla's internal CRM from scratch. React and TypeScript on the frontend, NestJS and GraphQL on the backend. I am product owner, manager and developer on it, which means I set the scope and priorities and then write the code.
- It is in production with real customer data. Onboarding and hardware use it today, about 10 people, and they tell me it has made their work faster. Sales and support come next, roughly 30 more users, and I am building the sales side now.
- Built it using an agentic AI workflow with MCP servers I set up myself. Good for scaffolding and repetitive work, less so where the domain logic gets fiddly.
- Tests in Jest and Playwright. I also review the team's code.
- Rebuilt the legacy email service and its templates. Faster and far easier to maintain than what it replaced.
- On call one week in every few.

Tech: React, TypeScript, JavaScript, Jest, Playwright, NestJS, GraphQL, MongoDB, Java, Maven, Kafka, AWS, Bash, Git

Founder and Game Designer | Independent mobile game Jan 2025 - Sept 2025

Stockholm. Own venture, investor backed.

- Designed a mobile game and built it in Unity.
- Hired and managed the team: one senior developer and a group of artists working on character and boss sprites. I also did some of the art myself using digital and AI tools.
- We reached soft launch beta. The investor then withdrew and I wound the project up and went back to engineering.

Tech: Unity, game design, digital and AI-assisted art

Full-Stack Developer, Lead Developer, Scrum Master | Sigma Technology AB

Jun 2021 - Jan 2025

*Stockholm. Consultancy. Client assignments below.***Ericsson AB**

Mar 2024 - Jan 2025

- Full-stack work on internal tooling for technical documentation. VanillaJS and Hugo on the frontend, Python behind it, deployed to Azure.
- Did the interface design in Figma and then built it. Covered as Scrum Master when the team needed it.

Telia AB

Oct 2021 - Sept 2023

- Worked on an internal web application that Telia's support organisation depends on, built in Vue.js and React with Redux and Vite.
- Lead developer and Scrum Master in a team of 22. Onboarded about five new engineers over two years and handled a lot of the code review.
- Wrote unit tests in Jest.
- Wrote Bash scripts that cut out some of the repetitive parts of the team's day.
- Took part in UX discussions and pushed for interface changes where they were needed. Also organised the weekly football, which did more for the team than most things I shipped.

Internal Sigma work

Sept 2023 - Feb 2024

- Internal tools and initiatives between client assignments.

Tech: Vue.js, React, TypeScript, Redux, Vite, Jest, VanillaJS, Node.js, Java, Spring Boot, WebFlux, Python, GraphQL, microservices, Hugo, Azure, Maven, Bash, WSL, Git

Software Developer | Tink AB

Feb 2021 - Apr 2021

Stockholm. Fintech.

- Worked on Console, the central web platform behind all of Tink's products. React, TypeScript and Node.
- Short contract. Set up regular syncs and followed up on what the team agreed in planning.

Software Developer | Adventure Box Technology AB

Mar 2020 - Aug 2020

Stockholm. Gaming.

- Worked on Adventurebox.com, a platform for making and playing voxel-based games, and rebuilt the redesigned homepage from scratch in React.
- Users ranged from children to adults on a wide spread of devices, so responsive and accessible markup mattered.

Software Developer | HMS Industrial Networks AB

Jan 2018 - Feb 2020

Halmstad. Industrial IoT.

- Worked on Netbiter, a microservices platform for monitoring industrial IoT devices, and built a test environment that simulated real-time device conditions.
- Handled AWS deployments, auto-scaling and certification, and automated the repetitive parts with Bash.

Tech: Java, Maven, Docker, AWS, Bash, Git, JIRA

TECHNICAL SKILLS

Languages: Java, Python, TypeScript, JavaScript, HTML, CSS, Bash

Frontend: React, Vue.js, Redux, React Router, Vite, VanillaJS, Hugo, Figma

Testing: Jest, React Testing Library, Playwright

Backend: Node.js, NestJS (current CRM at Qopla), Spring Boot, WebFlux, GraphQL, REST, microservices

Data: SQL, MongoDB, Cassandra, Kafka

Infrastructure: AWS, Azure, GCP, Docker, Jenkins, Linux, CI/CD, auto-scaling

AI tooling: agentic development workflows, MCP servers, context engineering

Working style: Agile, Scrum, Scrum Master, product ownership, code review, mentoring, on call

Tools: Git, Maven, JIRA, WSL

EDUCATION**CERTIFICATIONS**

MSc, Computer Science

Blekinge Institute of Technology, Karlskrona

Jan 2015 - Dec 2017

BSc, Computer Science

Jawaharlal Nehru Technological University, Kakinada

Jul 2011 - Dec 2014

Professional Scrum Master I (PSM I)

Scrum.org, Jan 2023

Node.js Masterclass

Udemy, Oct 2023

LANGUAGES AND INTERESTS

Languages: English, professional level. Swedish, basic, and I read Swedish documentation without trouble.

Interests: Game design, D&D, video games, table tennis.
